Map Page 1 of the annual inspection map, east of County Road U, the blue is what is in Brown County. Areas identified there in red are cattails and green is where NEW Water is funding a brush grinding/ tree removal project for next year.

Map Page 2 is the Hobart (yellow) section. Identified here in green needs tree removal. This is already in the works and planned for 2025 and will be funded by NEW Water.

There are various areas that need maintenance. The section located in black needs dredging and the estimated cost for that is around \$45,000. This portion here in green- we plan to design a continuation of a two stage.

Map Page 3 The south side of the Oneida Hobart District. There are additional areas highlighted that need cattails and dredging.

In summary in the Brown County section, 765' of phragmites, 1989' of brush needs to be sprayed. Oneida/Hobart North has 15,942' of cattails, 1,100' of cattails, 2,391' of brush to be sprayed. Oneida/Hobart South has 4,330' of dredging, 197' of phragmites, 90 of brush and 7,573 of cattails to be sprayed.

Oudenhoven: Is the goal to have all 2-stage ditches? Tanck commented right now funding is available for the installation a two-stage ditches. The more we can do the better. Kramer commented the bench acts like a floodplain, slowing the flow of water and reducing bank erosion. Two-stage ditches can be naturally formed or constructed. A two-stage ditch improves drainage. Water tests show the water quality is getting better with this design.
